

climate

climate change

equator

glacier

hot arid region

ice cap

polar region

**average weather
conditions over a long
period of time**

**significant shifts in
temperature and rainfall
over a longer period of
time, often measured in
decades**

**An imaginary circle
around the Earth. It
divides Earth into two
equal parts.**

a moving 'stream' of ice

**region with extremely hot
average temperatures all
year round and very low
levels of precipitation**

**a large, thick sheet of ice,
for example those
covering Antarctica and
Greenland**

**region with extremely
cold winters, short cool
summers and low levels of
snow or rain**
