reptile

A system which divides things into groups or types.

A creature with feathers and wings. Female birds lay eggs. Most birds can fly.

Animals such as frogs and toads that can live both on land and in the water.

The natural place something lives in. It provides living things with everything they need to survive such as food, shelter, and water.

Shows how each animal gets its food. One of the ways living things depend on each other.

A creature that lives in the water, breathes with gill, and has a tail and fins.

Cold-blooded animals which have skins covered with small hard plates called scales and lay eggs.

Animals such as humans, dogs, lions and whales. In general, female mammals give birth to babies rather than lay eggs.

A creature that does not have a spine, for example an insect, a worm, or an octopus.
